

Energie de demain

Prendre la France comme exemple sur le plan énergétique et prouver au monde que le nucléaire est l'énergie de demain

01

Les émissions mondial de Co2 02

Les différentes sources énérgetiques fossiles

03

Comparaison
des productions
énérgetiques
globales

04

Conclusions et sources

Les émissions mondial de Co2

Les émissions mondial de Co2

Charbon

Petrol

Gaz

Nucléaire

Comparaison

Proportions d'energie produite en KWH pour la même proportions de de CO2 produit.

Conclusion
